

Shaping Tomorrow's Oncology: From Discovery to Better Cancer Cure

Dear friends, colleagues, young oncologists, students, and everyone committed to better cancer care,

The Young Oncologist Club is delighted to invite you to the XIV International Meeting, which will take place on May 21–23, 2027, at Hyatt Regency Pravets. Under the theme „**Shaping Tomorrow's Oncology: From Discovery to Better Cancer Cure**“ this meeting will bring together young professionals, leading experts, and multidisciplinary teams to explore how today's discoveries can become tomorrow's standards of care.

Following the spirit of our previous meetings for precision and progress, our 2027 program will add a new accent: the translation of innovation into meaningful cure. Inspired by the newest directions in medical oncology, we will focus not only on what is scientifically possible, but also on how it can be delivered earlier, smarter, safer, and more equitably for every patient.

Oncology is entering a new era in which molecular diagnostics, liquid biopsy, artificial intelligence, radioligand therapies, antibody-drug conjugates, bispecific antibodies, cell therapies, cancer vaccines, and rational immunotherapy combinations are rapidly changing the way we diagnose, treat, monitor, and support people with cancer. At the same time, the field is moving upstream - toward prevention, early detection, interception, survivorship, and value-based patient-centered care.

Over two inspiring days, Bulgarian and international specialists in medical oncology, radiation oncology, surgery, pathology, molecular biology, nuclear medicine, imaging, and supportive oncology will discuss how discovery becomes better cancer cure across tumor types including lung cancer, breast cancer, gastrointestinal cancers, genitourinary cancers, melanoma, gynecological malignancies, hematologic malignancies, and rare tumors.

The program will include keynote lectures, clinical case discussions, interactive sessions, young investigator presentations, poster sessions, and practical workshops designed to connect research, clinical decision-making, and compassionate communication. Special attention will be given to the role of young oncologists in clinical trials, real-world evidence, digital oncology, multidisciplinary teamwork, and ethical implementation of new technologies.

All topics will be presented in English. You can register at www.youngoncologistbg.com.

We invite you to join us in Pravets to shape tomorrow's oncology together - from discovery to better cancer cure.

Best regards,
Rossitza Krasteva, MD, PhD
President of Young Oncologist Club
